## CLAY THEIR DAILY FOOD.

SUCH IS THE DIET OF A CURIOUS SET OF PEOPLE IN ALABAMA.

A Peculiar Complexion Seemingly the Only Real Effect—How the Clay Eaters Live and Get Their Daily Clay—One of Them Interviewed to Little Purpose.

"Those people are clay eaters."

The people referred to were a group of men and women of various ages who had gathered at a country store in Winston county, Ala., to barter a few eggs and chickens for coffee and tobacco. They were poorly clad, men and women were barefooted, and three children in the party were also barefooted. Their faces were pale and haggard, and their eyes were a dull, hopeless look, showing that they were not only densely ignorant, but without ambition to better their condition in any way. The storekeeper, after attending to the wants of these strange customers, informed the writer that they belonged to the poorest class of mountaineers who inhabited that section, and that white clay was a part of their regular diet.

The writer spent several days in Winston county, and visited the homes of a number of these people who eat clay as a part of their daily food. They live in small log cabins of the rudest kind, and eke out a miserable existence by farming, hunting and fishing. Their farms, or patches as they call them, are small, and the crops are few and far between. They are never more than a few acres in extent. Their crops consist of corn, peas, potatoes, and a few who are fortunate enough to own a horse attempt to raise a little cotton. The land is very poor, and as the crops are few and far between, the yield is always very poor. Men, women and children are slaves to the tobacco habit. The women chew and smoke, and most of them also use snuff when they can obtain it.

THE ABUSE OF A CLAY EATER.

The interior of the cabin of a clay eater is rude in the extreme. The cabin is usually built of small pine logs, from which the bark is sometimes removed. There are no windows and usually only one door. There are no pictures on the walls, no ornaments of any kind, and often no furniture worthy of the name. If there are beds, they are of the crudest kind, made by the head of the family with no other tools than a saw and an ax. Usually the cabin is too small for beds, and the family is large, and they sleep on quilts and mattresses spread on the floor. The entire family, often ten or more persons, eat and sleep in one small room. The cooking is done in the one fireplace, the utensils consisting of a frying pan, a kettle, an oven and a few other things. The clothes are old and ragged, and the modern conveniences are unknown.

The clay eaten by these people is found along the banks of the small mountain streams in inexhaustible quantities. It is a dirty white, and usually contains a pale yellow. It has a peculiarly oily appearance, and this oil keeps it from sticking to the hands or mouth. When dry it does not crumble, and a few drops of water will easily soften it until it can be rolled into any shape desired. It is almost without taste, but has a peculiarly earthy, or rather, a peculiarly clayey, taste. It is not a food, but a necessity, and as these people declare they can subsist upon it for days. They place a small piece in the mouth and hold it there until it gradually dissolves, and is swallowed in small quantities at a time. The quantity eaten at one time varies from a lump as large as a pea for the child or beginner to a lump as large as a hen's egg for those who have eaten it for years.

A CLAY EATER INTERVIEWED.

"How did you learn to eat clay?" I asked of a man whose face was almost the color of the stuff he was eating.

"Dunno," he answered. "I seen pap and others eatin' it, and I got it at."

"Does the habit grow until you acquire a taste for the stuff?"

"Can you quit eatin' clay?"

"Dunno; never tried."

"Has the stuff a pleasant taste?"

"If I want good I wouldn't be eatin' it," and the native drew a second lump from his pocket and began to eat it with a relish.

The only bad effect of clay eating seems to be the peculiar appearance it gives the skin of those who become addicted to the habit. The skin turns pale, or pale, in fact, as to a few, it gives the color of death, and then, later on, it turns a peculiar pale yellow, a color resembling the clay eaten. Children who become addicted to the habit grow old, at least in appearance, prematurely, and their faces lose the rosy, bright glow of youth and health. There is little sickness among the clay eaters, and they live as long as the average of mankind, so it is conclusive that the habit is not fatal in its effects.

It may or may not be the result of clay eating, but the fact is that the people who eat clay are the black followers of a voodoo. They have signs for everything and almost worship the moon. Corn is planted when the moon is full and potatoes are planted in the dark of the moon. They tell the moon is right, and they fear tell stories and all kinds of diabolical by the appearance of the moon. If one of a new moon is lower than the other it will rain before the moon changes again, say the clay eaters, but if the moon is low when the moon is high, and after a second or third change, again change occurs, - Mason (Ga.) Telegraph.

On Their Heads.

In France, when a patient is under chloroform, and a symptom of apoplexy appears, the physician turns him nearly upside down, that is, with his head downward and his heels in the air. This, they say, always restores him; and such is their faith in the efficacy of this position, that the strait jackets in the Paris hospitals are made so that in an instant they can be elevated with one end in the air, so as to bring the patient into a position resembling that of standing on his head. - Boston Free Press.

A Handy Test for Sewer Gas.

It is not generally known that sewer gas furnishes one of the most reliable means of detecting defective drainage. If it is covered with a black coating, or tarbush, soon after being closed, and after a second or third change, again change occurs, - Mason (Ga.) Telegraph.

His Imperial Highness the Grand Duke Constantine.

His Imperial Highness the Grand Duke Constantine, who is just issued a book of his own poems, entitled "New Verses." This is an extraordinary fact, for never before has a member of the imperial family been engaged in literature, and indeed, he is not a member of the imperial family, but rather a traditional in the Romanov family.

# Disease of the Heart.

In diseases of the heart, which persist for a long time and finally end, as a very large proportion of them do, in slow decay and a lingering death, dropy all ways sets in. In the late stages it is a most intractable symptom, and adds greatly to the suffering experienced. In the treatment, physicians have been wont to depend largely upon a diet of milk, which, in cases where it is well borne and can be persisted in, always acts well. But there are many patients who, for various reasons, cannot be kept on a milk diet for any length of time. To some it becomes abhorrent after a while, and others really cannot digest it properly, as simple food as it is. And besides that, a milk diet is really unsuited to no small proportion of patients affected with cardiac diseases. We have reference to those who cannot be kept quiet, but insist upon being up and about, often in the open air, if not engaged in light duties.

Professor German See, of Paris, has long been engaged in a study to learn what elements in milk render it so admirably adapted to stimulate the kidneys, increase the flow therefrom and hence prove of such great service in dropy. As a result of his investigation he is convinced that the one important element is sugar of milk. Acting upon that theory he selected twenty-five patients with heart disease, in all of which there was more or less dropy. To each he gave 100 grammes of the sugar of milk a day, dissolved in two quarts of water. In a few days a marked effect upon the kidneys was felt within from twenty-four to forty-five hours, and the dropy diminished rapidly, and almost all such swellings disappeared altogether after a series of treatment lasting from ten to eight days. This discovery is likely to prove one of the most important which has been made in the medical world for years. - Boston Herald.

A Looking and Looking Glass.

Appearance glass is a mystery, an object of intense interest to many animals, and it is often very amusing to watch their maneuvers. Professor C. Robertson describes the behavior of a large ape in the Jardin des Plantes, Paris. He was in an iron cage looking over some smaller monkeys. Ferns and other things had been thrown between the bars, which the ape attempted to seize. At length a small hand looking glass, with a strong wooden frame, was thrown into the cage. The ape seized it with his mouth, and he was very much amused to see his reflection. He was in an iron cage looking over some smaller monkeys. Ferns and other things had been thrown between the bars, which the ape attempted to seize. At length a small hand looking glass, with a strong wooden frame, was thrown into the cage.
